

SAA VR by Mentour 360

“MENTOUR 360 has just released SAA VR, a Virtual Reality mobile application in cooperation with Scandinavian Aviation Academy.

This app that lets you visit the flight school SAA in a Virtual “Open day”.
It is available for both IOS and Android devices using Google cardboard.

Barcelona/Stockholm - December 2016 - MENTOUR 360 SC has just released the first Virtual Reality mobile application for a flight training organisation. It is available for compatible IOS and Android devices and it gives the user a chance to experience Scandinavian Aviation Academy's facilities, simulator and aircraft in a “open day” style experience. Among other things you will get to experience a fantastic “cloud surfing” flight with their Diamond DA42 Twinstar aircraft. This will enable potential costumers from all over the world to get a fully immersive feeling of the quality and facilities of the flight school.
It will serve as an effective portal for SAA when trying to attract new costumers.

The application uses a menu interface that lets the user choose between 4 different Virtual Reality experiences inside Scandinavian Aviation Academy. The experiences will deepen the sense of what it is like to visit a flight school and how it feels to fly a real dual engined aircraft.

“This is a completely new and innovative way of showing the facilities of a flight school, you will be amazed”
- Petter Hornfeldt, Training Captain and co-founder of Mentour 360

It is possible to view the individual experiences in both “mono” and VR mode. This enables the user to use the application by:

- 1: Watching the screen, move the mobile device around or swipe to see the whole environment.
-This is easy to use and good for demonstrations.
- 2: Use Google Cardboard or any similar VR headset and look around in the cockpit.
-This gives the most immersive experience and lets the user take part of the environment and really feel like a part of the experience.

There is a possibility to “pause” the videos and to move along a timeline in each exercise. In the bottom of the User interface there is a link to the SAA homepage that will enable the user to book a real visit to the flight school among other options.

There is also a link to another Aviation VR app made by Mentour 360. The application also works with the mobile device “off line” or in Flight mode, except for the web links.

SAA is FREE and is available for iPhone 5 or later and most later Android devices.

The company MENTOR 360 SC is owned and run by Training Captain and Youtube profile Petter Hornfeldt, owner of the YouTube channel: www.youtube.com/mentourpilot
